

10.1" LCD Module with Mediaplayer

The slim 10.1" LCD module plays video clips in endless mode when switched on. The video files stored on the internal memory can be exchanged via mini-USB interface. Power is supplied through the same interface. An additional micro USB interface enables new files to be copied automatically during operation. Battery operation via the mini USB interface with a power bank is possible: a charge from a 10,000 mAh power bank lasts for approx. 15 hours. There is a soldering point on the back for an external loudspeaker. The power supply unit (100-240 VAC) and a USB cable are included in the scope of delivery.

Applications: video art, sales promotion, counter display, visitor guidance, price tags, etc.
